Abstract:

This seminar focuses on modern methods for designing and manufacturing microspeakers and other small, light and cost-effective loudspeakers reproducing the sound at high efficiency and sufficient sound quality as required in telecommunication, automotive, multi-media and other professional applications. The seminar gives an overview on physical modeling of loudspeakers in the large signal domain which is necessary to explain the relationship between geometry and the properties of the materials on the one side and the transfer behavior and the performance on the other side. Meaningful loudspeaker parameters (T/S, nonlinear and thermal) and other specifications (amplitude response, directivity, power) are discussed which allow a comprehensive description of the transducer. Prof. Klippel addresses the fundamentals of loudspeaker diagnostics which is important to interpret the measurement results and to localize the causes of the defects and to develop alternative design choices.

大聲壓輸出的小型揚聲器 Big Sound from Small Speakers, 2

www.klippel.de

Questions addressed in the Seminar:

- How to get the desired frequency response and directivity pattern?
- How to find the optimal geometry of the cone?
- How to measure the power handling?
- How to perform meaningful measurements in the large signal domain?
- How to find the optimal size of voice coil in the gap?
- Which loudspeaker nonlinearities are desired?
- How to get maximal power handling and acoustical output?
- How to get maximal bass out of a small enclosure?
- How to measure the power handling?
- What is a good and what is a bad speaker?
- How to select an optimal driver for loudspeaker system design?

揚聲器的應用俯拾皆是 Loudspeakers are everywhere

- 車用 Cars
- 手機 Cellular phones
- 多媒體, 電腦 Multimedia, Computers
- 助聽 Hearing aids
- 家用再生音響 Home hifi reproduction
- 專業音響 Professional audio
- 噪音控制 Active noise control
- ...

現代揚聲器訴求

Requirements on Modern Loudspeakers

- 小體積 Small dimensions
- 輕量化 Low weight
- 低成本 Low cost
- 高輸出低失真 High output at low distortion
- 最大效率 Maximal efficiency

→及再大聲一些 “Loud“speakers are required

Summary

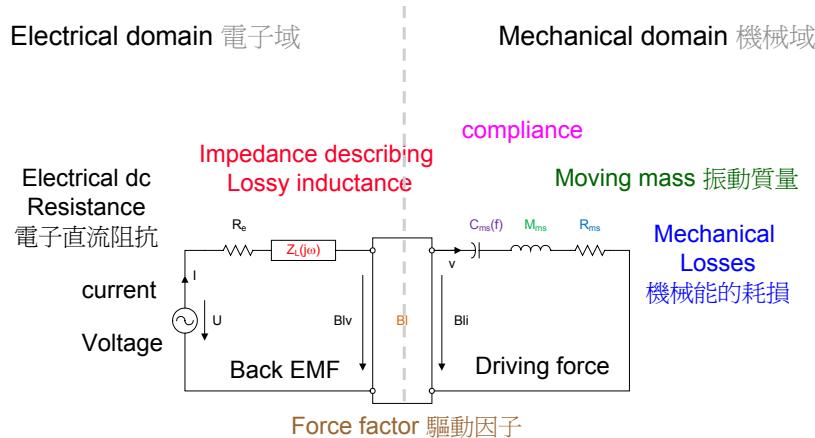

Equivalent Circuit of a drive unit

驅動器的等效電路

Impedance Type Analogy (Fu) 線性阻抗型

大聲壓輸出的小型揚聲器 Big Sound from Small Speakers, 9

www.klippel.de

Linear Lumped Parameters 線性集中參數

Basic parameters 基本參數:

- **dc resistance R_e** 直流阻抗
- Voice coil Inductance L_e (+ additional parameters describing impedance at higher frequencies)
- **Moving mass M_{ms} (with air load)** 振動質量(含空氣負載)
- **Force factor B_l** 驅動因子
- Mechanical resistance R_{ms} 機械阻抗
- **Stiffness K_{ms} of the suspension at f_s** 懸吊系統在共振頻率點的剛性系數
- Vicsco-elastic stiffness parameters („creep factor lambda“)
- **Effective Radiation Area S_D** 有效振動面積

— Important

重要參數

— Time varying

隨時間而改變的項目

Derived Parameters (Thiele/Small) 線性參數 (T/S):

- **Resonance frequency f_s** 共振頻率
- Electrical Q-factor Q_{es} 電器阻尼系數
- Mechanical Q factor Q_{ms} 機械阻尼系數
- Total Q-factor Q_{ts} 總阻尼系數
- **Equivalent box volume V_{as} of mechanical stiffness** 機械剛性的等效振動容積
- **Pass-band sensitivity** 系統靈敏度

大聲壓輸出的小型揚聲器 Big Sound from Small Speakers, 10

Identification of Mechanical Parameters

定義機械參數

We need more information about
the mechanical system

Known Perturbation of Mechanical System

已知機械系
(traditional technique 傳統科技)

- Requires second measurement with additional mass or enclosure 需要作附加質量或已知容積二次的測量
- Based on impedance measurement 基於阻抗的測量
- No mechanical sensor required 不需機械感測器
- Time consuming 較費時
- Problems with mass attachment, box leakage 當質量附加上去或是音箱漏氣時則有測量問題發生

Direct Measurement of a Mechanical Signal

直接測量機械信號

- Requires mechanical (acoustical) sensor (e.g. Laser) 需要一個感測器 (雷射偵測)
- Only one measurement (fast) 只需測量一次 (快速測量)
- Driver in free air or in enclosure 喇叭單體可置於自由空間或是音箱
- Reliable and reproducible data 可信賴及可重覆的資料
- Can be applied to tweeters 高音也可測

大聲壓輸出的小型揚聲器 Big Sound from Small Speakers, 12

www.klippel.de

Perturbation method: Sealed Test Box

測試方法1: 密閉測試音箱

大聲壓輸出的小型揚聲器 Big Sound from Small Speakers, 13

Pro 優點:

Simple technique 簡單的測試技術

Cms is measured primarily

已先測得單體的柔順性

Problems 缺點:

- Depends highly on precise value of effective radiation area Sd
需要有精準的有效振動面積數據

- Residual air volume (inside the transducer) can not be considered
無法考慮箱內的空氣容積

- requires sealed diaphragm
必須是密閉的振膜設計

- can not be used to measure mechanical mass without air load
若無空氣負載，無法測得機械重量

- Time consuming
較花費時間

www.klippel.de

Perturbation method: Added Mass

測試方法2: 附加質量

大聲壓輸出的小型揚聲器 Big Sound from Small Speakers, 14

Pro 優點:

Simple technique 簡單的測試技術

Mms is measured primarily

已先測得單體的有效振動質量

Problems 缺點:

- can not be applied to tweeter and microspeakers
無法使用此法測量高音及微型喇叭

- Time consuming 較花費時間

- Mechanical Resistance or stiffness are assumed as frequency independent parameters
機械阻抗或是剛性視為獨立的頻響參數

www.klippel.de

Laser Technique

雷射激光測試技術

Pro 優點:

- Fast (one step technique) 測量快速
- Simple to use 使用簡單
- B_t is measured primarily 先測得磁迴強度
- Most precise results 測試精準
- Can be applied to most transducers 可用在大部份的揚聲器測量上

Problems 缺點:

- Optical problems (angle, surface) 光學上需有可視角及表面反射
- Coil displacement is not axialsymmetrical 線圈的位移並不是軸對稱

大聲壓輸出的小型揚聲器 Big Sound from Small Speakers, 15

Measurement in air or in vacuum ?

在真空還是空氣中測量

In Air

Mms and Cms consider air load
→ Useful input for system design

在一般空氣中，有效振動質量及單體柔順性需考慮空氣的附載。建議使用在系統的設計

In vacuum

Mms and Cms consider mechanical elements only
→ Useful for driver design and comparison with the weight of the loudspeaker parts

在真空中量測，只需考慮有效振動質量及柔順性的機械元素。建議使用在單體設計及比較單體零件的材質重量
